

1. Double Click on My Computer.
2. Double Click on Dial Up Networking.
3. In the Name Box type in IGS. Leave the box for "I Know..." blank and click next to continue.
4. Put a check in all three of the next boxes for "I am calling..." "Send my..." and "The non-windows..." Click next to continue
5. Type in the MODEM phone number to dial, see your 'Personal Internet Information' sheet.
6. Put a check mark in Point to Point Protocol and leave the other box blank. Click next to continue.
7. Put a check in the box for "None", click next to continue.
8. Leave this next screen as it is by default. It is asking you for your IP address, by default it is zeroes. Click next to continue.
9. This screen is asking for DNS and WINS Configuration numbers. Leave everything either blank or at zeroes as it is by default.
10. At this point, you have answered all the questions required. Click Finish.
11. You should be at a dial screen with the name IGS in front of you and a dial or connect button. Click on dial and you should get a screen for your username and password. Enter them here and leave the domain box blank. Click on OK and your modem will dial and connect you.

Once you are connected click on the Internet Icon on your desktop to start Internet Explorer and go to the web address <http://www.kw.igs.net> and click on the link to IGS K-W Users Page Link.

Click on the e-mail Setup button to see, with screen captures, how to configure your email program of choice.

We recommend that you set your default starting page to be our home page, <http://www.kw.igs.net> as we have quick links to all the popular search engines, tons of free technical advice and software and updated news for our customers.

Enjoy your on-line time with IGS!
