The Proxy Server is an effective way to increase the speed and enjoyment of your visit to and usage of the World Wide Web. A Proxy Server is basically a machine that stores the main pages of the popular websites so that when a person requests the site you get the page from the proxy server instead of having to go directly to the site itself. This obviously is much faster for you. Extremely popular sites such as CNN or Sports Illustrated etc. should be updated every 30 minutes or so even on the Proxy Server so that your news will always be fresh and current.
